

Content Versions

All content in dotCMS maintains a change history that lists all previous versions of the content. The change history (and each older version) of any piece of content can be viewed, and the content can be reverted to older versions if desired.

- -

Saving and Publishing New Versions

Each time content is saved, the following occurs:

A new version of the content is created (with the same content [identifier](#), but a new [inode](#)).

- The new version is set to be the [Working version](#) of the content.
- The previous Working version is kept (and may be [accessed from the History tab](#) - see below).

Each time content is published, the following occurs:

- The current [Working version](#) of the content is set to be the [Live version](#).

Version History

To view all saved versions of the content, open the content properties and select the History tab:

The History tab displays the Identifier of the content. In addition, the History tab displays the following information for each version of content:

Column	Description
Status	The content state of the version (Working and/or Live).
Action	Displays one or more actions , as appropriate for the Status of the version.
Title	The Title of the content version (e.g. the Title of the content when that version was saved).
Author	The user who saved the version.
Modified Date	The date the version was saved.
inode	The inode of the version.
